

Summary of COVID Precautions and Safety Procedures

Our task force continues to monitor the COVID-19 (Coronavirus) pandemic and respond to the rapidly growing Delta Variant developments. We wanted to summarize for you the steps that have been implemented to ensure that our valued team members, clients, and their families are assured as much safety as possible during service delivery.

Most of these procedures have been in place since the beginning of the state of emergency on March 17th, 2020 and we remain dedicated to providing you the highest possible level of service during these unprecedented times:

- Health screenings – both upon entrance to facilities and self-screening prior to starting community or in-home services.
- Masks are required to be worn at all times while services are being provided. To date 10,000 masks have been made available to staff and families.
- Social distancing when and where possible.
- Frequent hand washing when and where possible.
- Flexible scheduling to reduce crowding in facilities.
- Frequent cleaning of commonly touched surfaces and increased frequency of deep cleaning at facilities.
- Incentives and information sessions to promote vaccine adoption by all eligible staff.
- Voluntary collection of vaccine status for potential new hires to meet family requests.

While none of us has a playbook to get us through this pandemic, our management team remains dedicated to using the resources provided to us by the CDC, DHHS, and State Government to guide our response to the continued community spread of COVID-19. We welcome your feedback to these or any other issues that you may encounter. Feel free to reach out to us via our SpeakUp link on the website, or to advocate@aboundhealth.com.
